

08/10/14

Ozone 1 recently installed the HydroGuard 302 chemical controller on one of our three swimming pools here at Q1 Resort & Spa. This pool holds 660,000 litres of water and the primary sanitation is by salt chlorination. This pool is always the most heavily used and we've traditionally experienced problems with maintaining the water quality levels particularly during peak usage times.

After three months of operation we can already see the advantages of the HydroGuard controller when comparing it to our other two pools. With the Hydroguard maintaining the pH and chlorine at optimum levels 24/7, our chemical usage and maintenance labour costs have decreased significantly. More importantly the Hydroguard has given us peace of mind knowing our compliance obligations are being met.

David Brauer and his team have been easy to deal with and have bent over backwards to meet our requirements.

I highly recommend Ozone 1 and the Hydroguard controller to anyone who wants a trouble free pool.
